Censo App Security Review Update

New security issues, 0

After the development team implemented the latest updates, FYEO conducted a review of the modifications. The primary goal of this evaluation was to ensure the continued robustness of the app's security features, safeguarding user data and maintaining the overall integrity of the applications.

General Updates:

The recent modifications predominantly centered around user interface and user experience enhancements. The changes reviewed added the ability to generate links to invite secondary approvers from the owner app. It is important to note that these changes do not introduce any vulnerabilities or compromise the security posture of the Censo apps. The adjustments serve to enhance user convenience and operational efficiency without detracting from the application's security foundation.

The changes in the Android app were simple bug fixes that fixed some re-rendering issues.

Specific Security Changes:

No security specific changes were detected in the reviewed code.

Commit Hash Reference:

For transparency and reference, the security review was conducted on the specific commit hashes for both the iOS and Android repositories. The commit hashes for the reviewed versions are as follows:

iOS: aa361c240428d331295185bb744216fe10a63f7d
Android: f8c09cff55cbc7131947c653dd1606fbae9907d3

Conclusion:

In conclusion, the security aspects of both Censo apps remain robust and unaffected by the recent updates. Users can confidently interact with the application, assured that their seed phrases and stored data are well-protected. The commitment to security exhibited by the development team is commendable, and we appreciate the ongoing efforts to prioritize the safeguarding of user information.
